Introducing the ChatableApps™ hearing aid app featuring VOXimity™ : Making every smartphone the perfect hearing aid for a noisy world.

When it comes to conversation, ChatableApps™ as a hearing aid app outshines conventional hearing aid devices because of our nifty propriety software, VOXimity™.

Apple:

Live Listen

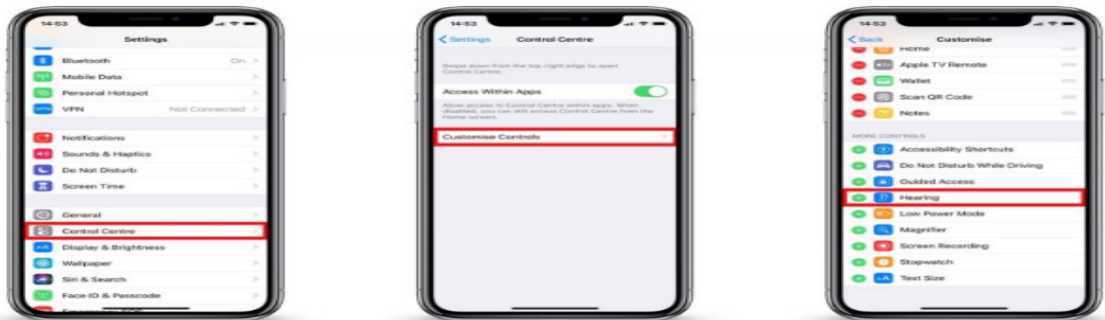

When Apple released iOS 12 in September, it added Live Listen support for [AirPods](#) and AirPods 2, making it possible to use your iOS device as a directional mic and have the audio relayed to Apple's wireless earphones.

As an accessibility feature, the idea behind Live Listen is for it to be used by people who are hard of hearing or need extra help separating voices in a loud environment, but it can be useful in other ways, too.

How to Set Up Live Listen on iPhone and iPad

- 1 Launch the **Settings** app on your iPhone or iPad.
- 2 Tap **Control Center**.

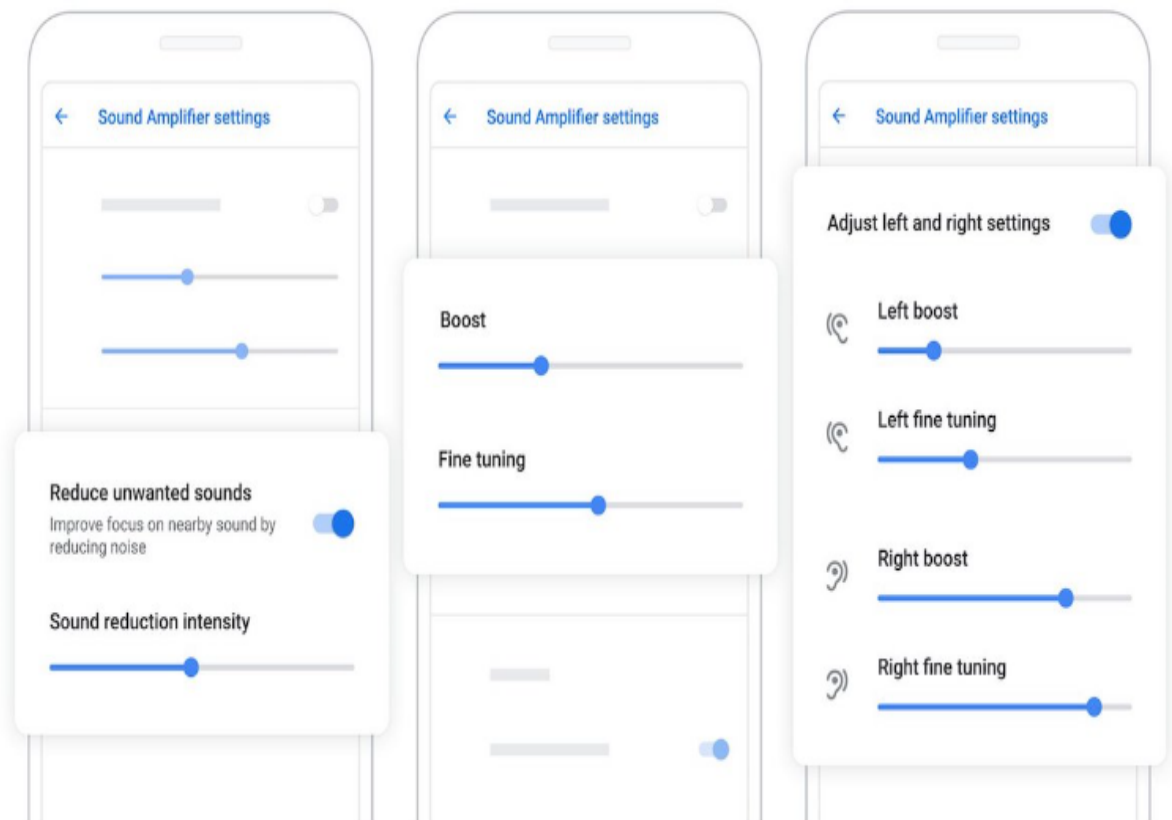

- 3 Tap **Customize Controls**.
- 4 Scroll down and tap the **green plus (+) button** next to Hearing.

Android

Sound Amplifier

Sound Amplifier app enhances hearing

The Sound Amplifier app lets users control their own listening experiences by adjusting audio and microphone settings with simple equalizer sliders. It enhances microphone audio through wired headphones, **boosting quiet sounds and reducing unwanted or distracting noises.**

The app is built into new Pixel 3 phones and available in the Google Play Store for any other phone running the new Android 9 Pie operating system.

Listen and speak (LAS) is a useful augmentative and alternative communication (AAC) APP. It can help people who can not express themselves verbally to communicate their needs and thoughts. LAS has self-built vocabulary set and word prediction function that can help those who have difficulty writing. Its main functions are as follows:

1. It has pre-designed ten vocabulary set, so AAC users can use it to quickly communicate with others. Meanwhile, the speech language pathologist or the special educator can copy and modify the pre-designed vocabulary set to a new set, based on the needs of the AAC user.
2. It has the menu of communication history. Therefore, the user can select from the menu and directly express the message they have constructed to the communication partner, without having to reconstruct the sentence.
3. It has the menu of my favorite sentence. AAC users can edit their favorite sentences based on the communication situation they are in.
4. It has flipped function. In a noisy environment, the communication partners can understand the message from AAC users from the opposite side of the device.
